CURRICULUM VITAE

Alexander V. Soudackov

Department of Chemistry
Yale University
225 Prospect St
New Haven, CT 06520

Tel: (203) 432-8625
E-mail: alexander.soudackov@yale.edu

Education

1981-1986 Moscow State University, Chemistry Department, Moscow, Russia; Major in Physical Chemistry, Quantum and Computational Chemistry; Minor in Theoretical Physics.

1986-1989 Postgraduate study at the Karpov Institute of Physical Chemistry, Moscow, Russia. Chemical Physics and Theory of Elementary Processes; Quantum Chemistry and Solid State Physics (Electronic Structure of Transition Metal Compounds); Quantum Statistical Mechanics.

Academic degrees

June 20, 1986 M.Sc. in Chemistry, Moscow State University, Chemistry Department, Moscow, Russia. M.Sc. Thesis: "The system of parameters of the effective Hamiltonian for the Titanium atom and its ions". Speciality: Theoretical and computational chemistry.

May 8, 1992 Ph.D. in Physics and Mathematics, Karpov Institute of Physical Chemistry, Moscow, Russia. Ph.D. Thesis: "Electronic Structure of Transition Metal Complexes". Speciality: Chemical physics and theory of elementary processes.

Awards

- International Science Foundation Research Award, 1993.
- Alexander von Humboldt Research Fellowship, 1994–1996.

Professional Experience

Since June 2018 Research Scientist, Department of Chemistry, Yale University, New Haven, Connecticut, USA.

February 2013 – May 2018 Research Assistant Professor, Department of Chemistry, University of Illinois at Urbana-Champaign, Urbana, Illinois, USA.

August 2002 – January 2013 Research Assistant Professor, Department of Chemistry, The Pennsylvania State University, University Park, Pennsylvania, USA.

July 2000 – August 2002 Research Associate in the group of Professor Gregory A. Voth, Department of Chemistry and Henry Eyring Center for Theoretical Chemistry, University of Utah, Salt Lake City, Utah, USA.

April 1998 – June 2000 Research Associate in the group of Professor Sharon Hammes-Schiffer, Department of Chemistry and Biochemistry, University of Notre Dame, Notre Dame, Indiana, USA.

1996–1998 Senior Research Associate at the Quantum Chemistry and Statistical Physics Laboratory directed by Professor M. V. Basilevsky, Karpov Institute of Physical Chemistry, Moscow, Russian Federation.

1994–1996 Alexander von Humboldt Research Fellow in the group of Professor Dr. Karl Jug, Theoretische Chemie, University of Hannover, Hannover, Germany.

1992–1994 Research Associate at the Quantum Chemistry and Statistical Physics Laboratory directed by Professor M. V. Basilevsky, Karpov Institute of Physical Chemistry, Moscow, Russia.

Research Experience

- Quantum calculations of atomic spectra of transition metal atoms and ions (M.Sc. Thesis).
- Development of a new quantum-chemical method for calculations of the electronic structure, optical spectra and magnetic properties of transition metal complexes (Ph.D. Thesis).[33,43,84,86,87,90–92]
- Magnetic properties of low-dimensional materials (conjugated polymers and charge-transfer molecular crystals).
- Large scale *ab initio* and semiempirical quantum chemical calculations of the chemical reactions (potential energy surfaces: stationary points and reaction paths) of organic molecules and proton transfer systems.
- Dielectric continuum theory of equilibrium and non-equilibrium solvation in polar solvents.[30,38,80]
- Dynamical theory of complex charge transfer reactions (electron transfer, proton transfer, proton-coupled electron transfer) in condensed phases.[31,35,41,44,46,47,50,62,67,72,74,79,83,85]
- Analysis of quantum-classical approximations for the dynamics of non-adiabatic transitions in dissipative systems.[41,44,47,50,57,58,83]
- Modeling of hydrogen tunneling reactions in molecular crystals at low temperatures.[77]
- Quantum and classical molecular dynamics simulations of chemical reactions in solution and in biological systems.[35,41,44,46–50,52,54,55,57,58,64,66,69]
- Development of the Empirical Valence Bond (EVB) methodology for molecular dynamics simulations of biological systems.[66,76]
- Theory of proton-coupled electron transfer processes in solution and at metal and semiconductor interfaces.[12,25,27,32,37,46,47,50,54,57,60–62,64,67,72–75,78,80]
- Theoretical studies of proton-coupled electron transfer reactions in biological systems.[10,12,16,20,25,26,29,34,40,48,52,60,64,75]
- Theory of interfacial proton-coupled electron transfer processes in electrochemical environment.[17,18,22–24,30,38,45,51,62,63]
- Artificial neural networks in quantum mechanics and quantum dynamics.[14,15]

Teaching Experience

- Course "Introduction to Theoretical Physics", College of Information Technologies, Moscow, 1992/1993.
- Undergraduate level course "Applied Quantum Chemistry: Potential Energy Surfaces for chemical reactions in the gas phase and in condensed medium", Higher Chemical College of Russian Academy of Sciences, Moscow, Fall Semester 1997.
- Undergraduate level course "Introduction to the theory of charge transfer reactions in condensed phases", Higher Chemical College of Russian Academy of Sciences, Moscow, Spring Semester 1998.
- Teaching assistance: Quantum Mechanics for graduate students, Department of Chemistry, The Pennsylvania State University, University Park, Pennsylvania, USA.
- Lectures on Molecular Dynamics Simulations of Molecular Systems (substitute lecturer, Chem 464: Chemical Kinetics and Dynamics, advanced undergraduate course), Department of Chemistry, Pennsylvania State University, Fall Semester 2009, 2010, 2011.
- Co-advised 14 graduate students and 12 postdoctoral associates

Computer Experience

- Programming languages: Fortran 77/90/2003/2008, C, C++, Python, Wolfram Mathematica.

  Coding projects:

  - EHCF - Quantum-chemistry package for calculation of electronic structure and electronic spectra of transition metal compounds (FORTRAN 77)
  - EHCF-SINDO1 - Incorporation of the EHCF method into the semiempirical quantum chemistry package SINDO1 (FORTRAN 77/C)
  - DLEVB - Multi-state EVB algorithm for molecular dynamics simulations of proton transfer processes in solution and biological environments (based on the DL_POLY package, FORTRAN 90/C
  - PCET - software package for calculations of rates and isotope effects of PCET reactions in solution and biological environments (FORTRAN 90/C)
  - DLPROTEIN_EVB - incorporation of the EVB methodology and force fields into the molecular dynamics simulation package DLPROTEIN (FORTRAN 90/C)
  - mathPCET - Wolfram Mathematica package containing functions and subroutines for the calculation of rates and kinetic isotope effects of PCET reactions
- Other programming and script languages: UNIX shells (bash, csh), awk, Perl.
- Expert in Wolfram Mathematica.
- Operating Systems: Microsoft Windows; Mac OS X; IBM AIX, HP-UX, Sun Solaris, SGI Irix, Linux.
- System and network administration of UNIX Clusters (IBM AIX, HP-UX, SGI Irix, Linux); administration and maintenance of Beowulf computer clusters.
- Parallel programming for shared memory and distributed memory computer clusters (OpenMP, MPI).
- OpenACC programming for GPUs.
- Web programming: Javascript, CGI, JSP, webMathematica

  Web development projects

  - webPCET - https://webpcet.chem.yale.edu - Java application server powered by Wolfram webMathematica: interactive simulations of proton-coupled electron transfer reactions on the web (Java Server Pages (JSP) servlets technology, JDBC, Java, Mathematica, Javascript, Perl, PHP, MySQL databases).

- Databases: MySQL, MongoDB.
- Molecular graphics and molecular modeling programs: Molden, GOpenMol, JMol, VMD, Maestro (Schrodinger LLC), and others.
- Quantum Chemistry Packages: Gaussian, GAMESS US, Q-Chem, MOLPRO, MOLCAS, Jaguar (Schrödinger LLC).
- Solid State Electronic Structure packages: Quantum Espresso, ABINIT, VASP, CP2K.
- Molecular Dynamics Programs: DL_POLY, CHARMM, GROMOS, AMBER, TINKER, GROMACS, NAMD, Desmond (D. E. Shaw Research).

Invited Talks and Seminars

1. University of Hannover Physical Chemistry Seminar, Hannover, Germany, May 16, 1996 (talk): "Effective Hamiltonian - Crysral Field approach on the INDO level: SINDO1 adaptation and applications to optical and Moessbauer spectra of large transition metal complexes".
2. INTAS Workshop on Dynamics of Proton Transfer Reactions in Polar Medium, Nancy, France, January 21-22, 1998 (talk): "Models of PT reactions in polar solvents. Non-adiabatic transitions between electron-proton states"
3. Midwest Theoretical Chemistry Conference, Notre Dame, Indiana, May 20-22, 1999 (talk): "Multistate continuum theory for proton-coupled electron transfer reactions in polar medium"
4. Pennsylvania State University Physical Chemistry Seminar, University Park, Pennsylvania, September 20, 2002 (talk): "Direct calculation of pKa for amino acid residues by means of molecular dynamics simulations: Implications for enzyme catalysis"
5. Quantum Atomic and Molecular Tunneling in Solids, University of Florida, Gainesville, Florida, June 22-25, 2003 (talk): "Recent advances and applications of the theory of proton-coupled electron transfer reactions in condensed phases"
6. Seminar of the New York section of the American Chemical Society, Syracuse University, Syracuse, November 14, 2004: "Theoretical models for complex charge transfer reactions in solution and biological environment"
7. DARPA Protein Design Processes (PDP) Program Workshop, Seattle, Washington, September 7-8, 2005: "Quantum-chemical probes in protein design algorithms".
8. DARPA Protein Design Processes (PDP) Program Workshop, Los Angeles, California, January 24-25, 2007: "Ranking protein designs: EVB approach to estimating the transition state structures".
9. Biological Physics Seminar at the Center for Biological Physics, Arizona State University, Tempe, Arizona, March 28, 2007: "Non-adiabatic Hydrogen Tunneling in Enzymes: Rates and Isotope Effects".
10. DARPA Protein Design Processes (PDP) Program Workshop, Santa Fe, New Mexico, June 13-14, 2007: "EVB approach for ranking protein designs: catalytic antibodies for Kemp elimination reaction".
11. American Chemical Society 234^{th} National Meeting, Boston, Massachussets, August 19-23, 2007: "Extended Spin-Boson model for nonadiabatic hydrogen tunneling in the condensed phase".

12. Brookhaven National Laboratory, Center for Functional Nanomaterials, Computational Materials Theory Meeting; Upton, NY, January 12, 2010: "Interfacial Proton-Coupled Electron Transfer: Electrochemical and Photoinduced Processes".

13. 217th Electrochemical Society Meeting - Vancouver, Canada, April 26, 2010: "Theoretical Studies of Interfacial Proton-Coupled Electron Transfer Reactions at Metal Electrodes".

14. International Lorentz Center Workshop on Modeling Natural and Artificial Photosynthesis, March 7-11, 2011, Leiden, Niederlands. Title of the talk: "Theoretical Modeling of Ultrafast Photoinduced Proton- Coupled Electron Transfer".

15. 16th ETSF Workshop on Electronic Excitations: Bridging theory and experiment, 27-30 September 2011, Turin, Italy. Title of the talk: "Theoretical studies of ultrafast photoinduced proton-coupled electron transfer reactions".

16. International Workshop on New Materials For Renewable Energy, 17-21 October 2011, The Abdus Salam International Center for Theoretical Physics, Miramare, Trieste, Italy. Talk 1: "Theoretical Modeling of Proton-Coupled Electron Transfer Reactions in Energy Related Materials"; Talk 2: "Non-equilibrium dynamics of photoinduced proton-coupled electron transfer".

17. American Physical Society March Meeting, 3-7 March 2014, Denver, Colorado, USA: "Nonadiabatic dynamics of photoinduced proton-coupled electron transfer processes in solution".

18. GDCh-Festkolloquium zum 75. Geburtstag von Prof. Dr. Karl Jug. Leibniz Universität Hannover, October 25, 2014, Hannover, Germany: "Probing Nonadiabaticity in Proton-Coupled Electron Transfer".

19. International Workshop on Computational Electrochemistry (IWCE 2018), July 9-12, 2018, Aalto University, Helsinki, Finland: "Modeling Electrochemical Proton-Coupled Electron Transfer Reactions at Metal Electrodes: Spanning Adiabatic and Nonadiabatic Regimes".
